Root Canal Treatment

The treatment that you have had today is one of the most intricate and complex of all dental procedures. It can often result in an amount of pain afterwards as the nerve of the tooth is involved. We always try to reduce the amount of pain to an absolute minimum.

Unfortunately, at the time the pain can be quite severe and we recommend Nurofen to relieve the pain, which can last 24-48 hours.

(If in doubt about Nurofen just check with your pharmacist.)

Very occasionally it may be necessary to take a course of antibiotics as infection can occur.
